#### deprescribing.org Benzodiazepine & Z-Drug (BZRA) Deprescribing Algorithm

## **BZRA** Availability

BZRA	Strength
Alprazolam (Xanax <sup>®</sup> ) <sup>⊤</sup>	0.25 mg, 0.5 mg, 1 mg, 2 mg
Bromazepam (Lectopam <sup>®</sup> ) $^{T}$	1.5 mg, 3 mg, 6 mg
Chlordiazepoxide <sup>c</sup>	5 mg, 10 mg, 25 mg
Clonazepam (Rivotril <sup>®</sup> ) <sup>T</sup>	0.25 mg, 0.5 mg, 1 mg, 2 mg
Clorazepate (Tranxene®) <sup>C</sup>	3.75 mg, 7.5 mg, 15 mg
Diazepam (Valium <sup>®</sup> ) $^{T}$	2 mg, 5 mg, 10 mg
Flurazepam (Dalmane®) <sup>C</sup>	15 mg, 30 mg
Lorazepam (Ativan <sup>®</sup> ) <sup>T, S</sup>	0.5 mg, 1 mg, 2 mg
Nitrazepam (Mogadon®) <sup>T</sup>	5 mg, 10 mg
Oxazepam (Serax <sup>®</sup> ) <sup>T</sup>	10 mg, 15 mg, 30 mg
Temazepam (Restoril <sup>®</sup> ) <sup>C</sup>	15 mg, 30 mg
Triazolam (Halcion <sup>®</sup> ) $^{T}$	0.125 mg, 0.25 mg
Zopiclone (Imovane <sup>®</sup> , Rhovane <sup>®</sup> ) <sup>T</sup>	5 mg, 7.5 mg
Zolpidem (Sublinox®) <sup>S</sup>	5 mg, 10 mg

T = tablet, C = capsule, S = sublingual tablet

# **BZRA Side Effects**

BZRAs have been associated with:

 physical dependence, falls, memory disorder, dementia, functional impairment, daytime sedation and motor vehicle accidents

Risks increase in older persons

# Engaging patients and caregivers

#### Patients should understand:

- The rationale for deprescribing (associated risks of continued BZRA use, reduced long-term efficacy)
- Withdrawal symptoms (insomnia, anxiety) may occur but are usually mild, transient and shortterm (days to a few weeks)
- They are part of the tapering plan, and can control tapering rate and duration

## Tapering doses

- No published evidence exists to suggest switching to long-acting BZRAs reduces incidence of withdrawal symptoms or is more eff-ective than tapering shorter-acting BZRAs
- If dosage forms do not allow 25% reduction, consider 50% reduction initially using drug-free days during latter part of tapering, or switch to lorazepam or oxazepam for final taper steps

### **Behavioural Management**

2. Do not use bed or bedroom for anything but sleep

of the night or after an awakening, exit the bedroom

4. If not asleep within 20-30 min on returning to bed,

8. Avoid exercise, nicotine, alcohol, and big meals

3. If not asleep within about 20-30 min at the beginning

5. Use alarm to awaken at the same time every morning

Primary care:

(or intimacy)

repeat #3

6. Do not nap

1. Go to bed only when sleepy

7. Avoid caffeine after noon

within 2 hrs of bedtime

Institutional care:

1. Pull up curtains during the day to obtain bright light exposure

- 2. Keep alarm noises to a minimum
- 3. Increase daytime activity & discourage daytime sleeping
- 4. Reduce number of naps (no more than 30 mins and no naps after 2 pm)
- 5. Offer warm decaf drink, warm milk at night
- 6. Restrict food, caffeine, smoking before bedtime
- 7. Have the resident toilet before going to bed
- 8. Encourage regular bedtime and rising times
- 9. Avoid waking at night to provide direct care
- 10. Offer backrub, gentle massage

## Using CBT

What is cognitive behavioural therapy (CBT)?

- CBT includes 5-6 educational sessions about sleep/insomnia, stimulus control, sleep restriction, sleep hygiene, relaxation training and support
- Does it work?
- CBT has been shown in trials to improve sleep outcomes with sustained long-term benefits Who can provide it?
- Clinical psychologists usually deliver CBT, however, others can be trained or can provide aspects of CBT education; self-help programs are available
- How can providers and patients find out about it?
- Some resources can be found here: http://sleepwellns.ca/
